## Southeast Goes Green

**Wednesday, October 21, 2009**  
**12:00 Noon in Sadie's Place**

### “PROMOTE SAFETY AND SUSTAINABILITY...”

The new Strategic Plan for Southeast Missouri State University states that the **University must “promote safety and sustainability and lead the region’s efforts to protect the environment and conserve natural resources.”**

So, how do we go about successfully addressing this important University priority?

This presentation will introduce and explore steps that the University community **can take toward a sustainable, “green” campus.**

Three levels of the University will be considered: individuals, organizational units (an office, a department, a residence hall floor, or a student club), and the overall institution.

At each level, economically sound steps can be taken to improve energy efficiency, conserve natural resources, and reduce environmental impacts.

These steps will address the Strategic Planning priority, foster environmental literacy, and help the University community develop a culture of environmental awareness and concern.

***This presentation is open to all and refreshments will be served.***

***Library Hosts: Twylla James, Matt Olsen,  
Cindy Raines, and Bob Willingham***
